"Using Mathematics to Unravel the Complexities Associated to Malaria Transmission Success, following a Human-Parasite-Mosquito Interaction in a Built Environment"

Monday, November 27, 2023

1 1 L

Plasmodium falciparum parasite is the cause of malaria, which is a life-threatening disease. The parasite is transmitted by a mosquito, which is a vector for the parasite. The parasite is transmitted from a mosquito to a human, where it can cause malaria. The parasite is transmitted from a human to a mosquito, where it can cause malaria. The parasite is transmitted from a mosquito to a human, where it can cause malaria. The parasite is transmitted from a human to a mosquito, where it can cause malaria.
